

Source panel	Ministry of the Environment General Waste Treatment Survey FY2005-FY2024 23,599 facility-year rows
---------------------	---

analytical split

A. Entry frame	
Question	Who first reports power generation?
Sample	At-risk non-generators 13,770 rows 2,035 facilities 141 events
Model	Exact-year lagged logit 10,823 rows 98 retained events
Claim	Selective entry, not a causal retrofit effect

B. Generator frame	
Question	How much electricity is recovered per tonne?
Sample	Identifiable operating generators 5,683 rows 1,016 facilities
Model	Logged MWh/t panel regressions pooled, year-FE, RE, year-FE + RE
Claim	Structured performance hierarchy within generators

Synthesis	One national fleet, two linked margins. An average-fleet view would conflate entry with post-entry performance.
