

Source panel	Ministry of the Environment General Waste Treatment Survey FY2005-FY2024 23,599 facility-year rows
---------------------	---

analytical split

A. Entry frame	
Question	Who first reports installed generation capacity?
Sample	At-risk no-capacity facilities 13,770 rows 2,035 facilities 141 events
Model	Year + elapsed-duration logit broad: 10,823/98 active: 9,215/58
Claim	Scale robust across frames; age pattern depends on risk set

B. Generator frame	
Question	How much gross electricity is generated per tonne?
Sample	Identifiable operating generators 5,683 rows 1,016 facilities
Model	Logged MWh/t OLS year + observed technology controls
Claim	Structured age/vintage, scale, and utilization associations

Synthesis	One fleet, linked outcomes: asset entry, active conversion, and post-entry position. A fleet average would conflate distinct estimands and decision points.
